

Before the Workshop — Setup at Home

Do this before you arrive. Estimated time: 15 minutes.

You only need to do this once. If you run into trouble, contact the workshop organizer in advance — we won't have time to troubleshoot installations during the session.

What You Need to Install

1 — *Claude Code*

Download from claude.ai/download and install the desktop app. Sign in with your Anthropic account (or create a free one).

2 — *Obsidian (skip if you already have VS Code)*

Download from obsidian.md/download and install it.

Obsidian is a free notes app that lets you browse and view the agent's files (like `CLAUDE.md` and the memory notes) in a nicer, more readable way than a plain text editor. You don't need to create an account or set anything up — just install it.

Already have Visual Studio Code installed? You can use that instead — skip this step.

The Agent Folder

A week before the workshop, you'll receive a zip file called `workshop_agent.zip`. Extract its contents and place them somewhere easy to find on your computer (Desktop or Documents works fine).

You're Ready

Bring your laptop to the workshop with:

- ☐ Claude Code installed and signed in
- ☐ Obsidian installed (or VS Code, if you already have it)
- ☐ The `workshop_agent.zip` extracted on your machine

See you at the workshop!
